Agenda

1. Client
2. Team
3. Current situation
4. Problem description
5. Project goal
6. Deliverables and non-deliverables
7. Constraints
8. Phasing

1. Client

The clients want an application that uses a website and Windows Form App, connected to a database. The theme of the project is “Study Fitness” – a self-study fitness.

The connection with the clients is done via email:

- Andre Postma: a.postma@fontys.nl
- Jessie Chua: j.chua@fontys.nl
- Frank de Lepper: f.delepper@fontys.nl

2. Team

The team consists of:

- Danko Kralski – software engineer (contact - 500872@student.fontys.nl)

3. Current situation

The clients currently do not have a software nor a website to manage the self-study fitness that helps people who want to gain knowledge in fitness by themselves.

4. Problem description

To provide exercise descriptions for their clients both at the fitness and from home.

5. Project goal

The aim of the project is to create the software application and website so that the clients can prepare and execute their exercises.

6. Deliverables

- Source code
- Website – displays information about the fitness
- Windows Form App – managing tool for the fitness
- Project Documentation

Non-deliverables:

- The needed equipment to run the software.
- Manuals for the system/website.

7. Constraints

We have some pre-determined limitations such as the time period and the programming languages that we use.

- The language that we will use for the desktop application is C# with windows form.
- For the web page we will use combination of HTML, CSS and optionally JS.
- For the database we are to use MSSQL with the Fontys database.
- There is an important deadline in the week 03.03.2023 where we must present the progress.
- The total time that we are given is 18 working weeks but after 6 working weeks from the start the project must have covered the scope and be ready for extensions.

The final deadline is on 10th of June 2023.

8. Phasing
